

Biodegradable Himalayan Salt Urn

The Salt Urn is individually hand-crafted by skilled artisans from solid blocks of Himalayan Rock Salt. The salt deposits in this region are over 250 million years old and are believed to be the purest on earth.

As a result of the hand-made and natural qualities of the Salt Urn, each is unique in both color and finish. In addition, it is natural for crystals to form on the exterior of the urn in humid climates. If this is the case with the salt urn that you have purchased, it can be gently wiped with a damp, clean cloth and lightly sanded with a fine sand paper if necessary.

The Salt Urn will sink quickly and dissolve within 4 hours when placed in water. When buried, the urn will biodegrade within three months.

Each urn comes with a biodegradable bag and tie for the cremated remains to be placed in, before being placed inside the urn. To temporarily seal the lid of the urn, squeeze a bead of non-toxic paper or wood glue (not included) onto the inside lip of the lid. Replace the lid and wipe away any excess glue with a clean, damp cloth. Allow 10 -12 hours for the glue to dry.

All federal and local regulations must be followed when placing this urn in water. This urn should NOT be used in protected or restricted waters. It should also NOT be placed into the ocean from the beach/pier.

This urn is fragile and should be handled with care to avoid potential damage. Always lift the urn from beneath, with two hands.
