The Shell Deep Water Bio Urn

Store and display the Shell Urn with the protective covering on. Each Shell Urn is packaged in a custom box that is a convenient and discreet way for families to transport the urn. This custom packaging received with the Shell Urn should be kept. The box (and urn) will pass through airport security screenings and can fit in the overhead compartment of most commercial airliners.

The Shell Urn is crafted by hand from recycled paper and paper clay. Each urn is hand painted and will differ in appearance from other Shells. Included with each urn is a biodegradable bag into which the cremains **MUST** be placed. **DO NOT** place cremated remains directly into the Shell Urn.

To close the urn, squeeze a bead of biodegradable glue around the edge of the opening and place the lid in the opening. Apply light pressure for two to three minutes or until the glue is dry. Wipe away any excess glue with a clean, damp cloth.

For water burial, place the Shell Urn onto the water's surface with the top facing up (top has fewer holes). The Shell Urn is designed and engineered to briefly float and gracefully sink. The time each Shell takes to sink will vary depending on the local conditions, weight and volume of the cremated remains, and how the urn is placed in the water. If the Shell is being placed into calm water, it is important that the urn be submerged briefly before being released. This will reduce the length of time taken for the urn to sink.

All federal and local regulations must be followed when placing this urn in water. This urn should **NOT** be used in protected or restricted waters. It should also **NOT** be placed into the water from the beach/pier.
